

YASSINE ALI KACEM

Agentic AI Developer • Multi-Agent Systems Engineer • Computer Science Student

Algeria • Age 21 • Saad Dahleb University, Blida • 3rd Year B.Sc. Computer Science

■ PROFESSIONAL SUMMARY

Motivated 3rd-year Computer Science student with a specialization in Agentic AI, Multi-Agent Systems, and Intelligent Automation. Proven builder of real-world AI systems including a production-grade Multi-Agent ERP with Master Orchestrator architecture, an AI hiring automation pipeline, and an e-commerce analytics platform. Experienced leader managing a 9-member AI team, with a track record of organizing major university tech events. Driven to design scalable, AI-powered systems that transform how businesses operate and make decisions.

■ EDUCATION

Bachelor of Science in Computer Science (3rd Year)

Saad Dahleb University - Blida, Algeria

- Focus areas: Artificial Intelligence, Machine Learning, Multi-Agent Systems, Software Engineering
- Additional studies: Data Analysis, System Architecture, Networking

■ CERTIFICATIONS

- Cisco CCNA 1 & 2 (Certified) • CCNA 3 (In Progress)
- DataCamp - Introduction to Natural Language Processing in Python (Oct 2025)
- Cyfrin - Blockchain Basics (Feb 2026)

■ LEADERSHIP & EXPERIENCE

AI Team Leader

Computer Science Community Club (CSCC) • Current

- Leading a team of 9 AI developers on applied AI research and production projects
- Designing multi-agent system architectures and agentic LLM pipelines
- Mentoring members in Machine Learning, Agentic AI, and software engineering best practices
- Overseeing end-to-end project planning, execution, and delivery

Vice President - External Relations

Computer Science Community Club (CSCC) • Aug 2025 – Feb 2026

- Managed strategic industry partnerships and external collaborations
- Organized and co-directed large-scale tech events: GeekConf, AfroBot, DataBounty, SpeakUp
- Led external communications and coordination with technology companies

Vice President (Intern)

Computer Science Community Club (CSCC) • Aug 2024 – Aug 2025

- Supported strategic planning, event logistics, and cross-team coordination

Training Manager

Computer Science Community Club (CSCC) • Jan 2024 – Sep 2024

- Designed and managed technical training programs for club members
- Organized AI, Machine Learning, and programming workshops

■ EVENTS ORGANIZED

AfroBot • SpeakUp • DataBounty • GeekConf • Multiple AI & Programming Workshops

■ PROJECTS

Multi-Agent Intelligent ERP System - *Agentic AI • Enterprise Resource Planning*

- Built a production-grade Multi-Agent ERP using a Mixture-of-Experts (MoE) architecture with a Master Orchestrator and six specialized domain agents (HR, Finance, Inventory, CRM, Sales, Document)
- Master Orchestrator reads user queries, maps them via a structured router prompt, outputs JSON delegation payloads, and synthesizes cross-domain responses into a unified executive summary
- Analytics / CEO Agent computes cross-domain KPIs unavailable to any single department (e.g., Revenue per Employee, Cash Flow Pressure, Customer Acquisition Cost) and returns strict JSON schemas for live dashboard rendering
- Sub-Module Pattern: Python pre-crunches raw data deterministically (anomaly detection, churn prediction, stock shortage modeling); LLM only receives statistical summaries eliminating hallucination on critical business data
- Demonstrated 99.9% time reduction vs. traditional analysis: complex cross-domain CEO queries answered in under 30 seconds vs. 4-6 days of human analysis
- Designed for enterprise scale: horizontal agent scaling, database sharding per department, async processing, audit trails, and on-premise LLM deployment for data privacy compliance

Multi-Agent Hiring System - *Agentic AI • Recruitment Automation*

- Multi-agent pipeline that ingests CVs and professional documents automatically via OCR and document parsing
- Scores and ranks candidates against job requirements without human intervention
- Recommends top candidates with explainable scoring, dramatically reducing time-to-hire
- Built on modern Agentic AI architecture with LLM-powered evaluation agents

E-Commerce Analytics Platform - *Freelance • AI-Powered Store Analytics*

- Automated data cleaning pipeline for raw sales datasets from multiple store sources
- Sales performance analysis delivering actionable insights and trend forecasting for store owners
- Interactive dashboards built with Plotly and deployed via Streamlit

Smart Agriculture System - *Machine Learning • Intelligent Irrigation*

- Integrates real-time soil sensors (pH, humidity, temperature) with a crop health ML prediction model
- Automates irrigation decisions based on live environmental data, optimizing water usage and crop yield

UniqueID - *Digital Identity System - In Progress*

- Hash-based unique identity system linked to national ID to prevent duplicate identities at scale
- Secure identity verification architecture - currently in system design and architecture phase

■ TECHNICAL SKILLS

AI & ML	Agentic AI, Multi-Agent Systems, LLM Orchestration, Machine Learning, Deep Learning, NLP
Architecture	Master-Slave Agent Design, MoE Architecture, ERP Systems, AI Pipeline Design, System Architecture
Programming	Python, Streamlit, Plotly, FastAPI, Data Analysis, Automation Systems
Networking	Cisco CCNA 1 & 2 (Certified) • CCNA 3 (In Progress)
Blockchain	Blockchain Fundamentals, Smart Contract Basics (Cyfrin Certified)
